ABSTRACTED-PUB-NO: JP 02292035A

BASIC-ABSTRACT:

An interior material comprises needle-punched nonwoven
cloth of synthetic resin fibre and a coating layer
comprising a thermoplastic resin dispersed with
microcapsules encapsulating a solvent having high
solubility of polypropylene resin.

Specifically the fibre is e.g. polyester polypropylene, Nylon acrylate and pref. polyester fibre in view of light fastness, heat-resistance, dimensional stability and inexpensiveness. The nonwoven sheet has fibres bonded with a thermoplastic bonder (e.g. polyacrylate resin, styryl/butadiene rubber, acrylonitrile/butadiene rubber, polyester, vinyl acetate resin, acrylate ester/styrol copolymer, vinyl chloride/styrol copolymer, vinyl chloride/ethylene copolymer, polyolefin, etc.). The microcapsules are prepd. by encapsulating e.g. perchloroethylene, pentachloroethylene, toluene, xylene, cyclohexane, n-hexane, benzene, n-decane, etc.) with thermoplastic resin (e.g. acrylate resin, polyester, Nylon, polyolefin, PVAC, styryl/acrylate ester copolymer, etc.) having a softening pt. = upto 140 deg.C.

USE/ADVANTAGE - The interior material is used for laminating with foamed polypropylene sheet for a ceiling, door trim, rear package, trunk room, etc, providing high adhesion with the foamed polypropylene layer.
